## Hello There!

I'm João and I'm a Portuguese UI Designer and Frontend Developer. I create experiences for iOS and Android, as well as pushing the web forward with the latest web technologies.

Great design is at the core of everything I do. Whether it's mobile or web design, I love to bring awesome design to life for clients with cool ideas.

I ensure that every site is built with clean and efficient code to maximise performance. Using HTML5 and CSS3 I build responsive frameworks which are at the core of what I think the web should be: responsive and adapted to the users' needs.

I'm a member of the design team at WIT, and I've been a UI & UX Designer there since October 2013, where I've had the privilege of working with some of the most talented professionals out there in the Tech industry and had some of the most challenging projects to work with.

Coimbra College of Education

In my spare time, I like to do the usual jogging, read a good book or listen to some great tunes, both with friends, family and my girlfriend. I usually take some free time to learn something new every month.
